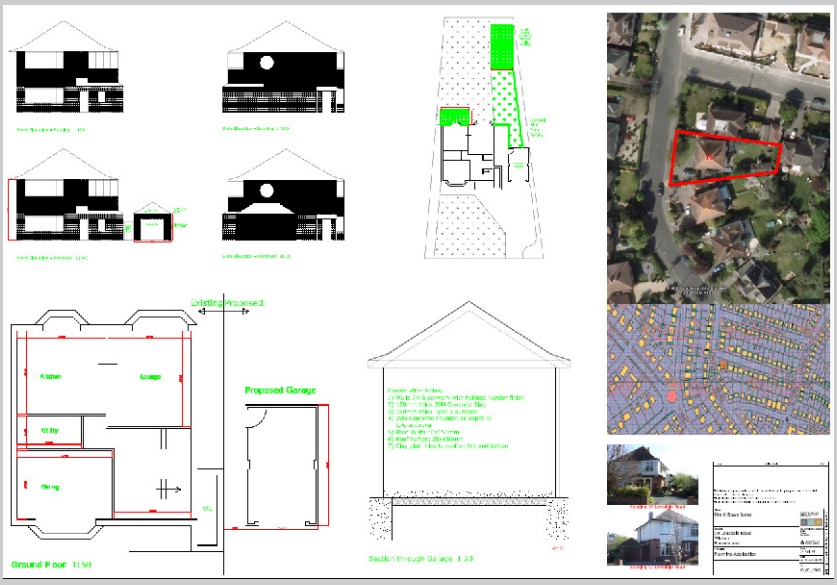
Residential
19 Lonsdale Road, Winton

CAM were recommended to the client by her father with whom a very successful major refurbishment project had been successfully completed.

The project involved the demolition of the existing detached garage structure within the rear garden and the sympathetic construction of a new garage to the front of the property with associated hard landscaping. Additionally we also formed a secluded Mediterranean style garden patio and provided a paved patio outside the kitchen. We undertook the Building Regulation and Planning submissions and obtained the relevant approvals on behalf of the client.

The neighbouring property had undertaken the same building works a number of years ago and therefore the newly constructed garage had to match within its surroundings. This was achieved by the salvage of the existing roofing tiles and the careful selection of the facade materials.


The project was completed on time and within budget and to a standard that the client is delighted with. Due to the success of this project the client has invited us to attend to further works.
